

In our capacity as telecommunications infrastructures specialists, we offer integrated turnkey solutions as well as specific and dedicated services.

We evaluate, design, locate, build, install, maintain and repair a diverse range of telecommunications network components.

We have the necessary expertise, skills, labour and cutting-edge equipment

to carry out the work required for the construction of all types of telecommunications infrastructures.

We are innovative women and men, who are passionate about our work and fully committed to delight our customers.

We are Telecon...

IN-BUILDING NETWORKS

In-building networks

NETWORK DESIGN

- design and engineering
- field drawings
- expertise and audit

PROVISIONING

Material and installation:

- structured cabling, inside wiring
- fibre optic cables
- conduits
- LAN and WAN network solutions
- wireless coverage (Wi-Fi and WiMAX)
- analog and digital wireless network links
- power equipment
- equipment room

Implementation, test and verification:

- equipment
- networks

CABLE SPLICING

- fibre optics
- copper

TESTS

- specialized tests
- frequency scanning
- compliance tests – copper and fibre optics

MAINTENANCE & REPAIR

- repair and maintenance of LAN and WAN networks
- dismantling of equipment rooms
- cable and infrastructure audit
- service transfer
- re-wiring of buildings and equipment rooms
- wireless coverage (Wi-Fi and WiMAX)
- analog and digital wireless network links
